TV and Radio Processing to be Discussed in Orban Teleconferences

Pennsauken, NJ -- Orban Labs, a worldwide leader in audio processing for AM, FM, TV and Internet broadcasting, will present advanced audio processing techniques in three upcoming teleconferences with company founder Bob Orban. These teleconferences are presented at selected SBE chapter meetings throughout the USA. Mr. Orban will make a 45-minute presentation at each meeting on audio processing and loudness control, followed by a Q&A session with attendees.

Mr. Orban's presentations discuss techniques for processing bass (including subharmonic synthesis), the uses and pitfalls of de-clippers, use of multidimensional phase correction to maximize mono reception while minimizing multipath distortion, and use of parallel compression for pre-processing. Television presentations also include Orban's approach to automatic, CALM-Act compliant loudness control. Teleconferences are sponsored by Broadcast Supply Worldwide (BSW), longtime distributor of Orban OPTIMOD audio processors.

Meetings have been scheduled for these locations:

November 13:	Binghamton, NY, SBE Chapter 1
December 10:	El Paso, TX, SBE Chapter 38
January 22, 2020:	Central Pennsylvania, SBE Chapter 41

Times for the teleconferences will be announced by the individual chapters.

Any SBE chapter wishing to set up a teleconference with Mr. Orban is encouraged to contact Orban Labs.
